

“With DeskCenter Management Suite we finally have an IT solution that supports our requirement to sustainability and responsible use of resources.”

André Tegge
IT system administrator

Sächsische Landesstiftung Natur und Umwelt

The Saxon Regional Conservation Foundation is a wholly non-profit organization under public law. The headquarter is located in Dresden. Founder is the Free State of Saxony.

The Foundation supports all endeavors and measures designed to protect and maintain nature and the environment as the natural foundation of life as well as to increase public awareness in the significance of conservation in science, education and society in the Free State of Saxony. In 2008 the foundation celebrated its 10th anniversary.

Implementation of Deskcenter Management Suite

As an appropriated fund, the Saxon Conservation Fund represents the main promotional fund of the Saxon Regional Conservation Foundation. The fund has been established to support activities and measures designed to protect and maintain nature and the environment. The National Park Centre „Sächsische Schweiz“ in Bad Schandau represents one of the most modern conservation visitor centers in Germany. The own academy has its focus in education and releases a variety of publications every year.

The Foundation has chosen DeskCenter Management Suite to replace a system that has been used till now. The software solution is used in combination with the helpdesk and enables the administration and support of all computer systems. After installation the Suite was ready to use and productive instantly. André Tegge, IT system administrator is convinced: “We are very satisfied with DeskCenter Management Suite. We finally found an IT solution that supports our requirement to sustainability and responsible use of resources.”

Essential for the decision was, next to the attractive price and the intuitive handling, also the high functionality and the intelligent energy management.

The product simplifies the inventory processes and software deployment enormously. Necessary updates can be installed without restriction of the users.

Time controlled start and shut down of the computers means a concrete potential saving and an active contribution to protecting the environment. This helps to reduce unnecessary electric power consumption and climate damaging CO2 emissions, because computers don't run at night and on weekends. This also increases the protection against uninvited access to sensitive data.

In times of scarce resources and increasing energy prices time is ready for responsible action - also in IT infrastructure. A large part of energy costs can accrue here. DeskCenter is aware of these ecological and economical requirements in companies and institutions. With DeskCenter Management Suite the vendor offers an efficient solution which has been amortized within a very short period.

DeskCenter® Management Suite

Modules being used:

- Hardware Inventory
- Software Inventory
- Asset Management
- Licence Management
- Software Asset Management (DNA)
- Energy Management
- Helpdesk
