

DeskCenter Package Studio

Package and Deliver

The MSI (Microsoft Windows Installer) technology is the standard for installing applications in Windows environments. DeskCenter Package Studio is a software packaging solution, which is specifically adjusted to the needs of packaging and customization tasks, based on the MSI technology. It is ideal for creating, editing and Repackage MSI and Windows Installer files for an easy Software Deployment on all systems in the company with the DeskCenter Management Suite.

Why is Packaging necessary

Before you can deploy software applications and programs automatically, they must be prepared well. With the DeskCenter Package you are able to create Studio MSI-based packages correctly for an automated and configured installation on Windows platforms:

- Packages include configured applications, designed for user needs.
- Packages can be installed unattended.
- Packages guarantee identical installations on thousands of clients.
- Roll out packets even faster with DeskCenter Management Suite.

Full Integration

The DeskCenter Package Studio integrates easily into the DeskCenter Management Suite. In combination, it accelerates through an intuitive interface and the use of many assistants the management of complex projects.

Everything from one source

In combination with Software Deployment, Patch Management and OS Deployment the Package Studio fulfills the requirements for a comprehensive software management. Trust in on powerful solutions out of one hand for the management of your software resources.

Software Packaging Solution made in Germany
