

AppCloud

Deskcenter AppCloud is a Deskcenter service that provides standard software in a pre-configured form. The packaging of software can be time-consuming, especially if it has to be constantly kept up to date. In addition, there are always installations that require special tricks. This effort is eliminated with the AppCloud, which is continuously updated to always provide users with the latest software versions. Quality assurance is naturally part of this. The aim

of the AppCloud service is the complete automation of the software life cycle. The packages provided can be used entirely for installing and updating systems or can be used as templates.

Functionality with many benefits

- » The AppCloud contains over 275 packaged current applications for installation and uninstallation, each in German, English, for x86 and x64
- » New applications are constantly being integrated
- » Complete automation of processes
- » Fully tested and verified packages
- » Policy-based verification of the version status of a software without user or administrator intervention
- » Individual customisation of the packages is possible (parameters, icons, etc.)
- » Weekly updates allow continuous adaptation and expansion
- » Support of platforms Windows 7 (x86, x64), Windows 8/8.1 (x86, x64) and Windows 10 (x86, x64)
- » Seamless integration into the Deskcenter Management Suite

- ✓ Continuous process in the life cycle of a software that can be automated
- ✓ Reduction of manual adjustments
- ✓ Security during rollouts due to extensive tests in advance
- ✓ AppCloud strategy is planning & standardisation

Use of the Deskcenter AppCloud

The Deskcenter AppCloud ensures simple handling in the area of software packaging, with which great added value can be achieved. Security concepts often require that the latest versions of software are always used.

With the variety of software installations, checking and maintaining the current software version is very time-consuming.

With the Deskcenter AppCloud, the latest software is always kept centrally and installed fully automatically by the policy-based check. The systems can thus be kept up to date and security risks kept to a minimum. This eliminates the need for packaging.
